1. Create a new Project

   Cremia's Kittens!

2. Add new assets

   Added kitten sprites from the store and playground assets

3. Apply existing scripts to assets

   Done.

4. Create a simple custom script to your game

   Rewrote the movement script to get practice and try to understand it.

5. Provide a document explaining how to play the game.

   The game is a simple platformer with the ability to move back and forth, and jump with the space bar. You play as a mother cat named Cremia, and your six kittens have scattered amongst the level to play. Find all six and you complete the level! Climb a cat tower, go through a broken bird cage and more to find all your kittens!

6. Send all these files to your GitHub Repository and submit your link to Moodle.
